

**PREMIUM COMFORT
WITHOUT THE
PREMIUM COST.**

**CUPRO NICKEL IS THE STANDARD ON ALL
HAYWARD® GAS POOL HEATERS.**

Hayward includes a cupro nickel heat exchanger as standard in all of our gas heaters (rather than charging you extra to upgrade). It's the best way to deliver the peace of mind your customers want, without the added costs.

DISCOVER A HIGHER STANDARD OF HEATING.

LOWER COST OF OWNERSHIP

Cupro nickel heat exchangers last longer than standard copper—and because they come free in all Hayward® gas heaters, your customers get the best value from day one.

LONG-LASTING DURABILITY

Superior corrosion resistance protects the heat exchanger from damage and premature failure caused by unbalanced water chemistry.

INDUSTRY-BEST HYDRAULIC PERFORMANCE

Designed with “totally managed” water flow and patented bypass, cupro nickel marries energy-saving efficiency with superior reliability.

WHY CUPRO NICKEL?

Cupro nickel is a copper-nickel alloy that resists erosion and corrosion caused by occasionally aggressive poor water chemistry. A Hayward cupro nickel heat exchanger is the key component for reliable, long-lasting performance and value.
