

Hayward D.E. Filter

Owner's Manual

IMPORTANT SAFETY INSTRUCTIONS

Basic safety precautions should always be followed, including the following: Failure to follow instructions can cause severe injury and/or death.

This is the safety-alert symbol. When you see this symbol on your equipment or in this manual, look for one of the following signal words and be alert to the potential for personal injury.

MARNING warns about hazards that could cause serious personal injury, death or major property damage and if ignored presents a potential hazard.

CAUTION warns about hazards that will or can cause minor or moderate personal injury and/or property damage and if ignored presents a potential hazard. It can also make consumers aware of actions that are unpredictable and unsafe.

The NOTICE label indicates special instructions that are important but not related to hazards.

Hayward Pool Products 400 Connell Drive, Suite 6100, Berkeley Heights, NJ 07922 Phone: (908) 355-7995 www.hayward.com

MARNING - Read and follow all instructions in this owner's manual and on the equipment. Failure to follow instructions can cause severe injury and/or death.

WARNING – Suction Entrapment Hazard.

Suction in suction outlets and/or suction outlet covers which are, damaged, broken, cracked, missing, or unsecured can cause severe injury and/or death due to the following entrapment hazards:

Hair Entrapment- Hair can become entangled in suction outlet cover.

disembowelment. Mechanical Entrapment- There is potential for jewelry, swimsuit, hair decorations, finger, toe or knuckle to be caught in an

- Dual suction fittings shall not be located on seating areas or on the backrest for such seating areas.
- The maximum system flow rate shall not exceed the flow rating of as listed on Table 1.
- Never use Pool or Spa if any suction outlet component is damaged, broken, cracked, missing, or not securely attached. O
- Replace damaged, broken, cracked, missing, or not securely attached suction outlet components immediately.
- In addition two or more suction outlets per pump installed in accordance with latest ASME, APSP Standards and CPSC guidelines, follow all National, State, and Local codes applicable.
- Installation of a vacuum release or vent system, which relieves entrapping suction, is recommended.

WARNING - Failure to remove pressure test plugs and/or plugs used in winterization of the pool/spa from the suction outlets can result in an increase potential for suction entrapment as described above.

WARNING - Failure to keep suction outlet components clear of debris, such as leaves, dirt, hair, paper and other material can result in an increase potential for suction entrapment as described above.

▲ WARNING — Suction outlet components have a finite life, the cover/grate should be inspected frequently and replaced at least every SEVEN years or if found to be damaged, broken, cracked, missing, or not securely attached.

A CAUTION – Components such as the filtration system, pumps and heater must be positioned so as to prevent their being used as means of access to the pool by young children. To reduce risk of injury, do not permit children to use or climb on this product. Closely supervise children at all times. Components such as the filtration system, pumps, and heaters must be positioned to prevent children from using them as a means of access to the pool.

MARNING — **Hazardous Pressure.** Pool and spa water circulation systems operate under hazardous pressure during start up, normal operation, and after pump shut off. Stand clear of circulation system equipment during pump start up. Failure to follow safety and operation instructions could result in violent separation of the pump housing and cover, and/or filter housing and clamp due to pressure in the system, which could cause property damage, severe personal injury, or death. Before servicing pool and spa water circulation system, all system and pump controls must be in off position and filter manual air relief valve must be in open position. Before starting system pump, all system valves must be set in a position to allow system water to return back to the pool. Do not change filter control valve position while system pump is running. Before starting system pump, fully open filter manual air relief valve. Do not close filter manual air relief valve until a steady stream of water (not air or air and water) is discharged.

MARNING — Separation Hazard. Failure to follow safety and operation instructions could result in violent separation of pump and/or filter components. Strainer cover must be properly secured to pump housing with strainer cover lock ring. Before servicing pool and spa circulation system, filters manual air reliéf valve must be in open position. Do not operate pool and spa circulation system if a system component is not assembled properly, damaged, or missing. Do not operate pool and spa circulation system unless filter manual air relief valve body is in locked position in filter upper body. **Never operate or test the circulation** system at more than 50 PSI. Do not purge the system with compressed air. Purging the system with compressed air can cause components to explode, with risk of severe injury or death to anyone nearby. Use only a low pressure (below 5 PSI), high volume blower when air purging the pump, filter, or piping. Use ONLY Hayward clamp system components: DEX2421JKIT clamp assembly, DEX2421J2 nut/bolt assembly, and a DEX2422Z2 metal reinforced seal. Non-Hayward components may fail in use and cause explosive separation.

Never rely on hand tightening the clamp nut to the clamp bolt. Using a 3/4" socket on a torque wrench, torque clamp nut and clamp bolt to 150 inch-lbs. Before starting system pump, insure filter manual air relief valve body is in LOCK position in filter upper body.

WARNING – Risk of Electric Shock. All electrical wiring MUST be in conformance with applicable local codes, regulations, and the National Electric Code (NEC). Hazardous voltage can shock, burn, and cause death or serious property damage. To reduce the risk of electric shock, do NOT use an extension cord to connect unit to electric supply. Provide a properly located electrical receptacle. Before working on any electrical equipment, turn off power supply to the equipment. To reduce the risk of electric shock replace damaged wiring immediately. Locate conduit to prevent abuse from lawn mowers, hedge trimmers and other equipment. Do NOT ground to a gas supply line.

WARNING — Risk of Electric Shock Failure to ground all electrical equipment can cause serious or fatal electrical shock hazard. Electrical ground all electrical equipment before connecting to electrical power supply.

WARNING – Risk of Electric Shock Failure to bond all electrical equipment to pool structure will increase risk for electrocution and could result in injury or death. To reduce the risk of electric shock, see installation instructions and consult a professional electrician on how to bond all electrical equipment. Also, contact a licensed electrician for information on local electrical codes for bonding requirements.

Notes to electrician: Use a solid copper conductor, size 8 or larger. Run a continuous wire from external bonding lug to reinforcing rod or mesh. Connect a No. 8 AWG (8.4 mm²) [No. 6 AWG (13.3 mm²) for Canada] solid copper bonding wire to the pressure wire connector provided on the electrical equipment and to all metal parts of swimming pool, spa, or hot tub, and metal piping (except gas piping), and conduit within 5 ft. (1.5 m) of inside walls of swimming pool, spa, or hot tub. **IMPORTANT** - Reference NEC codes for all wiring standards including, but not limited to, grounding, bonding and other general wiring procedures.

₩ARNING – Risk of Electric Shock. The electrical equipment must be connected only to a supply circuit that is protected by a ground-fault circuit-interrupter (GFCI). Such a GFCI should be provided by the installer and should be tested on a routine basis. To test the GFCI, push the test button. The GFCI should interrupt power. Push reset button. Power should be restored. If the GFCI fails to operate in this manner, the GFCI is defective. If the GFCI interrupts power to the electrical equipment without the test button being pushed, a ground current is flowing, indicating the possibility of an electrical shock. Do not use this electrical equipment. Disconnect the electrical equipment and have the problem corrected by a qualified service representative before using.

CAUTION — HAYWARD® pumps are intended for use with permanently-installed pools and may be used with hot tubs and spas if so marked. Do not use with storable pools. A permanently-installed pool is constructed in or on the ground or in a building such that it cannot be readily disassembled for storage. A storable pool is constructed so that it is capable of being readily disassembled for storage and reassembled to its original integrity.

WARNING – **Risk of Hyperthermia.** To avoid hyperthermia the following "Safety Rules for Hot Tubs" are recommended by the U.S. Consumer Product Safety Commission.

- 1. Spa or hot tub water temperatures should never exceed 104°F [40° C]. A temperature of 100°F [38° C] is considered safe for a healthy adult. Special caution is suggested for young children. Prolonged immersion in hot water can induce hyperthermia.
- 2. Drinking of alcoholic beverages before or during spa or hot tub use can cause drowsiness, which could lead to unconsciousness and subsequently result in drowning.
- 3. Pregnant women beware! Soaking in water above 100°F [38°C] can cause fetal damage during the first three months of pregnancy (resulting in the birth of a brain-damaged or deformed child). Pregnant women should adhere to the 100°F [38°C] maximum rule.
- 4. Before entering the spa or hot tub, users should check the water temperature with an accurate thermometer; spa or hot tub thermostats may err in regulating water temperatures by as much as $4^{\circ}F$ (2.2°C).
- 5. Persons taking medications, which induce drowsiness, such as tranquilizers, antihistamines or anticoagulants, should not use spas or hot tubs.
- 6. If the pool/spa is used for therapy, it should be done with the advice of a physician. Always stir pool/spa water before entering the pool/spa to mix in any hot surface layer of water that might exceed healthful temperature limits and cause injury. Do not tamper with controls, because scalding can result if safety controls are not in proper working order.
- 7. Persons with a medical history of heart disease, circulatory problems, diabetes or blood pressure problems should obtain a physicians advice before using spas or hot tubs.
- 8. Hyperthermia occurs when the internal temperature of the body reaches a level several degrees above normal body temperature of 98.6°F [37°C]. The symptoms of Hyperthermia include: drowsiness, lethargy, dizziness, fainting, and an increase in the internal temperature of the body.

The effects of Hyperthermia include:

- 1. Unawareness of impending danger.
- 2. Failure to perceive heat.
- 3. Failure to recognize the need to leave the spa.
- 4. Physical inability to exit the spa.
- 5. Fetal damage in pregnant women.
- 6. Unconsciousness resulting in danger of drowning.

SAVE THESE INSTRUCTIONS

GENERAL INFORMATION

Your **Hayward** D.E. Filter combines superior water filtration with ease of operation and totally corrosion-free construction. It uses diatomaceous earth (D.E.), which is the most efficient dirt remover and filter medium known.

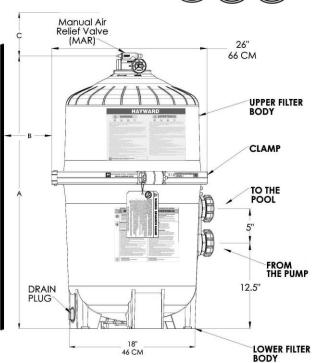

The D.E., which is usually fed through the skimmer at initial start-up, uniformly coats the filter elements that are covered with a custom fitted monofilament polypropylene filter cloth. As pool water is pumped through the control valve into the bottom of the filter tank, the D.E. surface, or coating, filters out even the minutest particles resulting in clear, clean, sparkling water.

After a period of time, the accumulated dirt in the filter causes a resistance to flow, the pressure rises, and flow diminishes. This means the dirt holding capacity of the D.E. has been reached, and it is time to clean (backwash) your filter. With the control valve in the back wash position, the water is automatically reversed through the filter, flushing trapped dirt, debris and D.E. out the waste line. Once the filter is backwashed (cleaned) of D.E. and dirt, the control valve is manually re-sequenced to filter position and a fresh charge of D.E. is added to resume normal filtering.

⚠ This product should be installed and serviced only by a qualified professional.

Only simple tools (screwdriver and wrenches), plus pipe sealant for plastic adapters, are required to install and/or service the filter.

- 1. The filter system should be installed on a level concrete slab or other rigid base. Select a well drained and vented area, one that does not flood when it rains. Position the filter so that the piping connections, and winter drain are convenient and accessible for operation, service, maintenance and winterizing.
- 2. Position filter so the filter will drain by gravity.
- 3. If practical, place pump and filter in the shade to shield it from continuous, direct heat from the sun.
- 4. Assemble appropriate Filter Control valve (See Page 7 for selection) to filter. Lubricate the O-ring first (we recommend using Jack's 327 Lubricant). Align the two (2) valve pipe connections, with O-rings in place, with the two openings in the side of the filter tank and press in firmly. Secure the assembly to the tank connections with the two bulkhead lock nuts. Do not over-tighten.
- 5. Connect the pool suction plumbing between the skimmer, pool outlet and the pump.
- Install the pool return plumbing.
- 7. If pressure gauge is not installed, apply Teflon tape to the gauge threads and carefully screw the gauge into the gauge adapter assembly.
- 8. Do not locate pump controls over or near filter.
- 9. Verify water discharge from the filter manual air relief valve is directed away from electrical devices

STARTING THE PUMP and FILTER SYSTEM

WARNING

Before Starting the Pump

1. Use ONLY Hayward clamp system components; DEX2421JKIT clamp system, DEX2421J2 nut/bolt assembly, DEX2422Z2 metal reinforced seal. Non-Hayward clamp components may fail in use and cause explosive component separation. Verify that upper and lower filter bodies are properly secured with the filter body clamp. Never rely on hand tightening the clamp nut to the clamp bolt. Using a 3/4" socket on a torque wrench, torque clamp nut to clamp bolt to 150 inch-lbs. Verify that the filter manual air relief body is in the LOCK position, and no filter components are missing, damaged or not genuine Hayward components. (See Fig 2)

2. Close filter drain. Note: Filter plug requires an o-ring seal. (See Fig 4)

3. Open all system valves to allow water from the pool to the filtration system and from the filter to return to the pool.

4. Place the manual air relief valve in OPEN position. (See Fig 2)

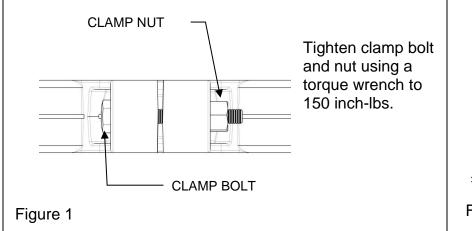

Starting Pump

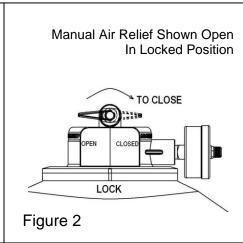

1. When starting system pump, do not stand over or near filter. If water leakage appears at filter tank clamp, immediately turn off all system circulation pumps and all electrical power. Do not return to the filter until all water leakage has stopped.

Reassemble the clamp system per the instructions on page 7 in this owner's manual to stop leak.

2. Return to filter to CLOSE manual air relief valve only when a steady stream of water (not air or, air and water mix) is discharged from the manual air relief valve.

3. To avoid damages to the filter elements, DO NOT operate the filter for more than a minute or two without the D.E. precoat.

Pre-Coating

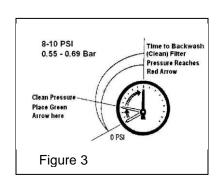

Add the correct amount of D.E. (see specifications on the previous page of this manual or on the filter label) into the system through the skimmer – as fast as the plumbing will take it. Record the pressure gauge reading after the D.E. has been added. This is the "pre-coat" or "clean" pressure.

OPERATION M WARNING FILTERING

Filtration starts as soon as the filter has been pre-coated. As the filter removes dirt from the pool water, the accumulated dirt causes a resistance to flow. As a result, the gauge pressure will rise and the flow will decrease. When the pressure rises 8-10 psi (.55-.69 bar) above the pre-coat pressure, it is time to backwash (clean) the filter. Once your filter is running and there is a pressure reading, line up the green arrow with the current reading. (See Fig 3) When the pressure rises to or above the red or second arrow, it is time to clean your filter.

Note: During initial clean-up of the pool, particularly with a new pool or a very dirty pool, it may be necessary to backwash more frequently due to the heavy initial dirt load in the water.

To prevent unnecessary strain on piping system and valves, always shut off pump before switching Filter Control Valve positions.

FILTER CONTROL VALVE FUNCTIONS

Six-Position Vari-Flo™ Filter Control Valve SPo710XR50 or SPo715XR50

- (A) FILTER Set valve to FILTER for normal filtering. Also use for regular Vacuuming.
- BACKWASH -
 - Shut off the pump. a.
 - Set Filter Control Valve to BACKWASH.
 - Start Pump and backwash approximately two minutes, or until water out waste line appears clean.
 - Shut off pump.
 - Set Control Valve to RINSE.
 - Start pump and operate for 20 seconds. f.
 - g. Shut off pump.
 - Set Filter control valve to FILTER.
 - i. Proceed as in Pre-Coating to add fresh D.E.
- (C) RINSE Water Flows through the filter the same as in FILTER position, except that the water goes to WASTE. An optimal position used for pre-coating if a large cloud (pre-coat puff) is observed returning to pool during the pre-coating process.
- (D) **WASTE** To bypass filter for draining or lowering water level and for vacuuming heavy debris directly to WASTE.
- (E) **RECIRCULATE** Water is re-circulated through the pool system, bypassing the filter.
- (F) **CLOSED** Shuts off flow from pump to filter.

Four Position Selecta-Flo™ Filter Control Valve SP0740DE or SP0425

- (A) FILTER Set valve to FILTER for normal filtering. Also use for regular Vacuuming.
- (B) WASTE—To bypass filter for draining or lowering water level and for vacuuming heavy debris directly to WASTE.
- BACKWASH
 - a. Shut off the pump.
 - b. Set Filter Control Valve to BACKWASH.
 - c. Start Pump and backwash approximately two minutes, or until water out waste line appears clean.
 - d. Shut off pump
 - e. Set Filter control valve to FILTER.
 - f. Proceed as in Pre-Coating to add fresh D.E.
- (D) POOL OR SPA BOOST Water is re-circulated through the pool system, bypassing the filter.

Two-Position Slide Valve SP0410X502S

- (A) FILTER Set Valve to FILTER for normal filtering. Also use for vacuuming (Handle in Down position).
- (B) BACKWASH -
 - Shut off the pump.
 - Set valve to **BACKWASH** (UP position).
 - Start Pump and backwash approximately two minutes, or until water out waste line appears clean. С.
 - Shut off pump
 - Set Filter control valve to FILTER (DOWN Position).
 - Proceed as in **Pre-Coating** to add fresh D.E. for cleaning filter (Handle in Up position)

MANUAL CLEANING

Before manually cleaning the filter, backwash by following BACKWASHING instructions under each type of valve.

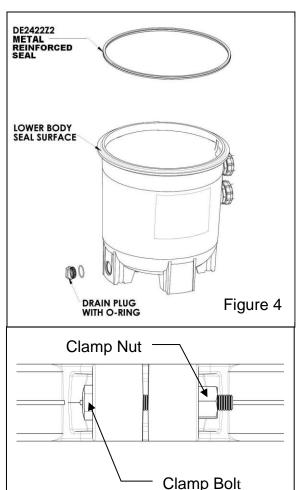

This product should be installed and serviced only by a qualified professional.

FILTER DISASSEMBLY INSTRUCTIONS

- Turn off all system circulation pumps and all electric power on the pad.
- Set all system valves in a position to prevent water flow to the filter.
- The manual air relief valve must be placed in the OPEN position. (FIG 6) 3.
- Remove filter drain plug (FIG 4) and drain water from filter.
- Using 3/4" wrenches, loosen and remove the clamp nut and the clamp bolt. (Fig 5)
 Holding both ends of the filter body clamp carefully spread the clamp ends. Remove the clamp by lifting over the upper filter body. Do not to drop the clamp during removal because the clamp could be damaged. Do not strike the clamp with metal tools as they can damage the clamp.
- Lift off upper filter body. Do not use the pressure gauge to lift the upper filter body.

INITIAL CLEANING OF ELEMENT CLUSTER ASSEMBLY

Before removing the element cluster assembly we recommend hosing it down with a strong stream from a garden hose or preferably with the Hayward cleaning wand (EC2024). Be sure the drain plug is not in place or the drain valve is open. Remove as much of the dirty D.E. and accumulated debris as possible by flushing it out of the drain opening. This will allow for easier removal of the element cluster assembly.

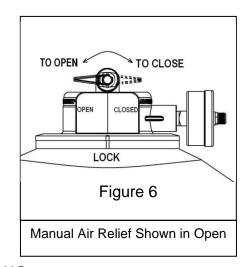

REMOVING ELEMENT CLUSTER

Rock the element cluster assembly slightly from side to side to free the manifold from the vertical outlet elbow. The element cluster assembly may now be removed by lifting it straight up using the lift handles.

CLEANING ELEMENT CLUSTER

The filter element cluster can be cleaned by washing inside and outside with a garden hose. After hosing filter element cluster, for best results, carefully brush the surface to remove fine particles. Do Not Pressure Wash as it can damage the filter element cluster. You may find some debris on the filter element cluster, which may not

You may find some debris on the filter element cluster, which may not have been removed with hosing.

FILTER RE-ASSEMBLY INSTRUCTIONS

CLEAN SEAL RING AND SEAL SURFACE

1. Remove filter tank seal.

Figure 5

- 2. With a clean cloth wipe the lower filter body seal surface. (Fig 4) Do not use a solvent.
- 3. With a clean cloth wipe the upper filter body seal surface.

Notice: • Do not use any petroleum solvents to clean filter components.

• Do not lubricate DEX2422Z2 Seal.

RE-INSTALLING ELEMENT CLUSTER

- 1. Lubricate outlet elbow O-rings with Jack's Formula 327 Multilube.
- 2. Replace filter element cluster into filter tank, carefully fitting top collector manifold outlet over outlet elbow O-ring.

A This product should be installed and serviced only by a qualified professional.

BODY AND CLAMP RE-ASSEMBLY

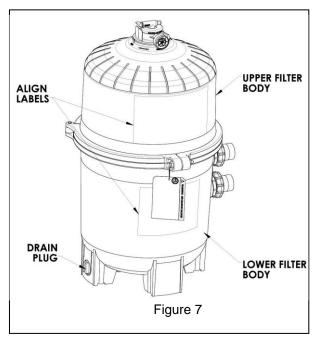

- 1. Place the metal reinforced seal on the lower filter body (Fig 4). Place the upper filter body on the Hayward DEX2422Z2 metal reinforced seal and lower filter body in a position which allows all operation and safety labels to be clearly visible and the upper body to be centered on the lower filter body. Press down firmly and evenly to set the upper filter body. (Fig 7)
- 2. Replace the filter clamp around the upper and lower filter bodies. Hold the clamp ends to position the clamp on the filter bodies with the clamp ends adjacent to the safety and operation labels on the filter bodies. (Fig 7)

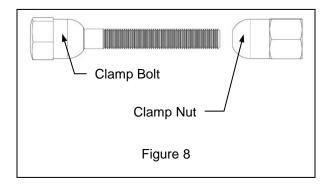

▲ DO NOT HIT OR STRIKE CLAMP WITH HAMMER OR METAL TOOLS.

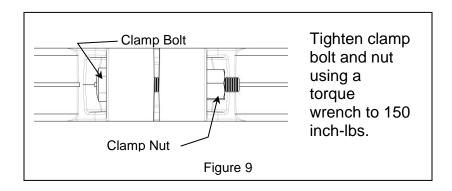

- 3. Insert clamp bolt through the clamp ends and thread the clamp nut onto clamp bolt with rounded end of the nut (Fig 8) towards the ends of the clamp.
- 4. Never rely on hand tightening of clamp nut to clamp bolt. Using a 3/4" socket on a torque wrench, torque clamp nut to clamp bolt to 150 inch-lbs. (Fig 9).
- 5. Follow Operation Instructions for "Starting the Pump and Filter System" (Page 5).

VACUUMING

Vacuuming can be performed directly into the filter whenever needed. Backwash filter after vacuuming, if required.

REMOVING THE MANUAL AIR RELIEF VALVE

A WARNING

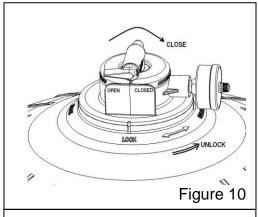

Your Filter comes with a Manual Air Relief Valve (MAR) pre-installed from the factory.

• Only qualified pool professionals should service your filter's Manual Air Relief Valve.

For Qualified pool professionals only: If MAR valve needs to be serviced, follow these instructions carefully.

- 1. Turn off all system circulation pumps and all electric power on the pad.
- 2. Set all system valves in a position to prevent water from flowing to the filter.
- 3. The manual air relief valve must be placed in the OPEN position.
- 4. Wait until all water leakage has stopped.
- 5. Grasp the MAR body at the flats, turn the MAR counterclockwise until the indicator on the on the MAR flange is aligned with the "UNLOCK" position on the upper filter body.
- 6. Pull straight up to remove the MAR, a slight rocking motion may help.

Manual Air Relief Shown Open In Locked Position Rotate counterclockwise to UNLOCK

RE-INSTALLATION OF THE MANUAL AIR RELIEF VALVE

- 1. Check the o-ring seals, replace as needed.
- 2. With a clean cloth, wipe upper filter body and o-ring groove. Remove all dirt and debris.
- 3. Align the notch in the MAR Flange with notch on top of the upper filter body.
- 4. Press the MAR straight down into the upper filter body
- 5. Turn the MAR clockwise until the indicator is aligned with the "LOCK" position on the upper filter body.
- 6. Verify the MAR discharge points away from all electrical connections.

WINTERIZING FILTER

▲ In areas where subfreezing temperatures can be expected, the filter should be drained to protect the filter from damage.

- 1. The filter should be disassembled and the filter elements cleaned or replaced.
- 2. Follow directions under FILTER DISASSEMBLY INSTRUCTIONS
- 3. Then REMOVE FILTER ELEMENTS per instructions
- 4. Reassemble per the instructions on Page 8.
- 5. Be sure to leave the drain plug unattached during the winter season to avoid cracking the filter body.

SERVICE AND REPAIRS

Consult your local authorized Hayward dealer or service center. No returns may be made directly to the factory without the expressed written authorization of Hayward Pool Products.

HAYWARD® Pool Products Limited Warranty

To original purchasers of this equipment, Hayward Pool Products, Inc. warrants its products to be free from defects in materials and workmanship for a period of ONE (1) year from the date of purchase, when used in single family residential applications.

The limited warranty excludes damage from freezing, negligence, improper installation, improper use or care or any Acts of God. Parts that fail or become defective during the warranty period shall be repaired or replaced, at our option, within 90 days of the receipt of defective product, barring unforeseen delays, without charge.

Proof of purchase is required for warranty service. In the event proof of purchase is not available, the manufacturing date of the product will be the sole determination of the purchase date.

To obtain warranty service, please contact the place of purchase or the nearest Hayward Authorized Service Center. For assistance on your nearest Hayward Authorized Service Center please visit us at www.hayward.com.

Hayward shall not be responsible for cartage, removal, repair or installation labor or any other such costs incurred in obtaining warranty replacements or repair.

The Hayward Pool products warranty does not apply to components manufactured by others. For such products, the warranty established by the respective manufacturer will apply.

The express limited warranty above constitutes the entire warranty of Hayward Pool Products with respect to its' pool products and is in lieu of all other warranties expressed or implied, including warranties of merchantability or fitness for a particular purpose. In no event shall Hayward Pool products be responsible for any consequential, special or incidental damages of any nature.

Some states do not allow a limitation on how long an implied warranty lasts, or the exclusion of incidental or consequential damages, so the above limitation may not apply to you. This warranty gives you specific legal rights, and you may also have other rights, which vary from state to state.

*Supersedes all previous publications.
